ning_aoi

This assessment evaluates the supplied area of interest for review against configured satellite-derived datasets. It is an evidence package, not a compliance determination.

Commodity

Coffee

Country

Brazil

AOI area

1,722.1 ha

AOI total

JRC 2020 baseline area

219.3 ha

12.732% of AOI

Post-2020 loss area

23.77 ha

1.38% of AOI

Review status

Needs review

! Potential post-2020 forest disturbance detected; human review required. Under a broader tree-canopy ($\geq 10\%$) forest baseline (the FAO/EUDR Art.2 forest definition), 0.70 ha of post-2020 forest loss overlaps the configured commodity layer, even though the stricter JRC closed-canopy baseline shows no such overlap; both baselines are reported, not reconciled into one figure. This report supports review and does not certify EUDR compliance or non-compliance.

The analysis follows a transparent deterministic workflow from canonical inputs to generated artifacts.

Regional/state boundary AOI boundary

- LOCATION
Brazil
- STATE
Minas Gerais
- MUNICIPALITY
Coromandel
- CENTROID
-18.518, -46.898
- AOI AREA
1,722.1 ha

Commodity-region rationale
No cited commodity-region rationale is configured in the canonical references, so no rationale has been invented.

Forest extent mapped by JRC Global Forest Cover 2020 inside the AOI.

Tree-cover loss evidence detected by Hansen Global Forest Change during 2021-2025, shown together with current forest and coffee plantation extent for context.

Before/after imagery is used only when configured source imagery is available in the evidence bundle.

■ AOI boundary

Dates	2020-07-01/2020-10-01 Sentinel-2 L2A median true-color composite vs 2025-07-01/2025-10-01 Sentinel-2 L2A median true-color composite
Providers	Sentinel-2 L2A true-color visual composite

Evidence suggests potential post-2020 forest disturbance within the AOI.

- **Hansen/JRC disturbance**
23.77 ha
- **TMF deforestation**
Unavailable
- **TMF degradation**
Unavailable
- **RADD alerts**
Confirmed/high-confidence: Unavailable; low-confidence: Unavailable.
- **Source-linkage gap**
The AOI is concession context; harvesting block, tree/log origin, shipment linkage and chain-of-custody evidence remain separate gaps.
- **Legal boundary**
No compliance determination is made by this report.

EUDR Compliance Status

NEEDS REVIEW

Not sufficient information to confirm compliance.

Analysis conducted using configured datasets and reproducible processing from the canonical report model.

Forest Baseline	jrc_gfc2020_v3
Forest Loss	hansen_lossyear
Commodity Layer	FDP Coffee Probability model 2026a
Imagery	Sentinel-2 L2A true-color visual composite
Processing	Local raster processing (rasterio/NumPy): deterministic_categorical_raster_intersection
Spatial Resolution	10.0 m (EPSG:6933) analysis grid
Temporal Scope	Cutoff 2020-12-31; evidence 2021-2025
Uncertainty And Coverage	15 declared evidence gaps

Configured dataset records

Limitations And Evidence Gaps

jrc_nodata_inside_aoi: JRC GFC2020 nodata pixels inside AOI were excluded from forest baseline metrics.

hansen_nodata_inside_aoi: Hansen lossyear nodata pixels inside AOI were excluded from loss metrics.

grid_alignment_transformation_applied: Categorical rasters were aligned to the deterministic target grid with nearest-neighbour resampling.

commodity_threshold_not_locally_calibrated: The configured probability threshold (0.025) is a generic model cutoff; it has not been locally calibrated for this AOI or country.

commodity_local_validation_missing: No locally validated (ground-truthed) accuracy assessment for the configured commodity probability model is supplied for Brazil by this run; localized accuracy assessment is the consumer's responsibility.

commodity_absence_not_established: Low or missing localized commodity-probability evidence is not evidence that the commodity is absent: it reflects a missing localizing signal, not a negative finding.

hansen_treecover2000_nodata_inside_aoi: Hansen treecover2000 nodata pixels inside AOI were excluded from the canopy-cover forest baseline metrics.

Sample/test-AOI notice	Review source report audit metadata to identify sample or test AOIs where relevant.
