Review status
Needs review

Potential post-2020 forest disturbance detected; human review required. This report supports review and does not certify EUDR compliance or non-compliance.

Deterministic-processing statement: inputs, parameters, outputs, and generated artifacts are versioned and cryptographically hashable for integrity checks.

INTERPRETATION

Evidence suggests potential post-2020 forest disturbance within the AOI.

- Hansen/JRC disturbance
10,914.5 ha
- TMF deforestation
5,386.3 ha
- TMF degradation
7,088.1 ha
- RADD alerts
Confirmed/high-confidence: 13,502.2 ha; low-confidence: 4,569.9 ha.
- Source-linkage gap
The AOI is concession context; harvesting block, tree/log origin, shipment linkage and chain-of-custody evidence remain separate gaps.
- Legal boundary
No compliance determination is made by this report.

EUDR Compliance Status

NEEDS REVIEW

Not sufficient information to confirm compliance.

ASSESSMENT WORKFLOW

The analysis follows a transparent deterministic workflow from canonical inputs to generated artifacts.

FOREST LOSS AFTER 2020

Post-2020 change evidence is shown as a cross-observer comparison. Hansen/JRC, TMF deforestation, TMF degradation and RADD alerts have different source definitions, sensors, spatial supports and temporal semantics; differing areas are reported as method differences, not as automatic source error.
